

Remote Learning Resources

Resource

To assist students in getting started with the basics of website development using HTML, CSS, etc., we provide the **Treehouse** platform for course learning. Please become a paid member first. After a seven-day free trial period, pay for a month (\$25 plan), and then after the start of school, **present your receipt to AppWorks School** for a monthly fee (\$25). (If you have any questions or are unable to purchase Treehouse yourself, please contact us on the **Discord** channel for details.)

1. HTML Basic: <https://teamtreehouse.com/library/html-basics-2>
2. CSS Basic: <https://teamtreehouse.com/library/css-basics-5>
3. CSS Layout: <https://teamtreehouse.com/library/css-layout>
4. Flexbox Layout: <https://teamtreehouse.com/library/css-flexbox-layout>
5. Introduction to Git: <https://teamtreehouse.com/library/introduction-to-git>

We also recommend that students apply for a **ChatGPT** account at <https://chat.openai.com/>. The topic of "How to use GPT to assist in learning programming" will also be discussed in subsequent courses.

IDE

We recommend you to download the **Visual Studio Code** editor to your computer. In future courses, we will mainly use VS Code as an example to install packages. Notice that this is not related to this assignment.
